General course information:
Management decisions are called “strategic”, when they are made from a high-level perspective and are impacting the fundamental direction of a company. They provide guidance on the market positioning and the level of resources to gain a competitive advantage. In doing so, strategic management ensures the long-term success of a company. This module offers participants the opportunity to gain the respective methodical and systemic management know-how. The students get to know and practice the relevant methods via lectures and practical examples. Goal is to enable them to independently solve and discuss case studies. These case studies have to be prepared in group work and presented in the lectures.

Course objectives:
After successfully competing this course, the students will have developed the following knowledge and competences:

- Defining the characteristics and tasks of strategic management
- Differentiating between normative, strategic and operative management
- Developing a strategic portfolio
- Planning the objects and process of strategic management on company and business unit level
- Assessing information on the internal and external environment
- Applying methods and tools for strategic planning
- Evaluating different strategic alternatives

Learning Resources:

The books by David/ David, Lynch and Grant are procurable in (online) book stores – also secondhand. The main library of University of Applied Sciences Ludwigshafen keeps one reference book of the latest edition for in-library-usage as well as older editions for lending.

Assignments: written exam
Lecturer: LB Lacher  ECTS: 6
