

BFI 321 Accounting in SAP ERP

SAP is the world market leader of ERP software. The software is widely spread and used by many large and midsize companies. In this SAP ERP lecture, different important business processes are presented. After a short introduction of SAP and the SAP ERP System, each process is shown in the SAP S/4HANA system followed by an exercise phase for the students. The processes focus on the financial part within S/4HANA, but not restricted to it (e.g. the purchase-to-pay, the order-to cash processes, asset accounting and controlling are demonstrated).
